

Provide your organization with the TOOLS needed to efficiently and effectively deliver on your agency's Field based Operational Best Practices.

Why should you use TrueRoute?

Reduce operational costs of excessive vehicle mileage, fuel, and wasted staff time

Eliminate the need for map books in the field with a centralized application

Make better decisions with better information to enhance your efforts

Track inspection data, recommendations and follow-up results with customers

TruePoint provides a tool to effortlessly route your field staff in the most efficient and optimal manner for scheduled site visits. We understand that onsite work processes within each agency will differ based on size, complexity, and business objectives. TrueRoute enables each agency to manage any predefined or agency specific tasks, data collection, and duration. Integrate to your current Permitting, Licensing, Billing, CRM and Work Management systems to accomplish the task of timely scheduled inspections and service delivery.

TrueRoute Features and Benefits

1. Turn by Turn directions for staff to get from one jobsite to the next
2. Specific Tasks to be performed at the jobsite with the ability to create detailed, agency required data collection input screens without programming
3. Web Services based NavTech data ensures the best available routing with the most up-to-date information

From the most basic of menus your staff can allow for the integration of data from other third party systems into the routing engine. Based upon standardized XML document formats, load current and validated information for analysis of routes. Once locations for inspections/services have been imported into the TruePoint system, let the powerful combination of Web Services from Microsoft and TrueRoute go to work for your staff.
